

Want to fly a Boeing 737?

Indulge yourself and support our industrial project

Gosselies, Belgium (August 7, 2014)

Venyo's main activity is to design, build and sell professional flight simulators. The company also provides advanced training for future airline transport pilots (MCC, JOC, TR 737, etc.) in the frame of the new EU regulation (Approved Training Organisation BE/ATO-101).

After 5 years of research and development, Venyo stands in the final run-up before the industrial production

and marketing of its products. All that is needed now is the EASA certification (firstly) and the FAA certification (immediately afterwards) to enable a professional operation of its simulators worldwide. In view of this EASA certification, we would like to submit our preproduction unit to a series of "long term" tests, with your contribution.

From September on, and for a few months only, we are going to offer everyone the opportunity to take the controls of our professional Boeing 737NG flight simulator and live a unique complete immersive experience in the cockpit of a real modern airline aircraft. This Fun Flight activity, open to anyone from 7 to 107, will be preceded by a briefing, and an instructor will guide you during the whole flight duration.

2 options are available:

- Individual participation (219€ including taxes for a one hour flight)
- Group participation (Team Building / Incentive / Private Event) for max. 12 participants (from 1.250€ excluding taxes for a 4 hour flight)

Registrations exclusively on www.venyo.aero
